Workshop

Objective

Read the instructions carefully and implement a frontend page CRUD operation for arriving methods

Develop a frontend page with the following functionality and user it's URL:

1. Get all arriving methods with consideration the pagination and filtration.

Method Get
http://40.127.194.127:777/api/Emergency/GetAllArrivingMethods?first=0&page=0&rows=10

2. Add new arriving method.

Method Post
http://40.127.194.127:777/api/Emergency/AddOrUpdateArrivingMethod
Body
{
 "id": number,
 "accountId": 1, /*static value*/
 "arrivingArabicName": "string",
 "arrivingEnglishName": "string",
 "sort": number
}

3. Update exist arriving method.

Method Post
http://40.127.194.127:777/api/Emergency/AddOrUpdateArrivingMethod
Body
{
 "id": number,
 "accountId": 1, /*static value*/
 "arrivingArabicName": "string",
 "arrivingEnglishName": "string",
 "sort": number
}

4. Delete exist arriving method (with confirmation alert).

Method Post
http://40.127.194.127:777/api/Emergency/DeleteArrivingMethod
Body
{
 number /*id for the row*/
}

Technical Requirements

1. Create the structure that make it easy to develop and maintain the code.
2. Create a repository (gitlab or github) and make it public for all and push your work on it.

Good Luck
